### III. CHAPTER III – METHODOLOGY 47

**Purpose** 47

**Participants** 48

**Measures** 49

- Dysfunctional Separation-Individuation Scale 50
- Separation-Individuation Test of Adolescence 52
- Self-Image Questionnaire for Young Adolescents 54
- Reynolds Adolescent Depression Scale 55
- Research Design 56

**Description of Procedures** 57

### IV. CHAPTER IV – RESULTS 59

**Plan of Analysis** 59

**Internal Consistency and Factor Structure** 59

**Convergent and Discriminant Validity** 61

**Concurrent Validity** 62

**Tests-of-Means** 63

### V. CHAPTER V – DISCUSSION 68
Summary of Findings 69
Discussion of Validity Indices 70
Discussion of Tests-of-Means 71
Implications 71
Recommendations for Future Research 72
Conclusion 73

ACKNOWLEDGMENTS

There are a great number of people to whom I am indebted, as this project would not have come to fruition were it not for their support. First, I would like to thank the school administrators and faculty at the Paulding County School District for allowing me access and encouraging their students to participate. I would like to thank my brother for helping me keep my sense of humor about this often humorless endeavor. Thanks to my parents for showing me the value of hard work and a good education, and for guiding me through my own adolescent separation-individuation process with love and understanding.

Thanks to my Dissertation Committee, who readily shared their knowledge and experience, and were always patient and understanding. Especially, I would like to thank Dr. Dan Lapsley, whose guidance and friendship made this project possible at all. And finally to my wife Stacy and son Sam who were my source of inspiration and my motivation through many long hours.
ABSTRACT

Separation-individuation has been consistently identified as a critical process in adolescent development. Dysfunction in the separation-individuation process has previously been linked to pathology among college students and adults. The purpose of this study was to validate the psychometric integrity of the Dysfunctional Separation-Individuation Scale in a population of young adolescents. A one factor structure of the 19-item scale was obtained. The scale correlated highly in the expected directions with other measures of separation-individuation, as well as with measures of depression and positive adaptation.
