Abstract

Colleges implement risk management programs to help keep their students safe, but they cannot protect against all risks. The students can also play a major role to protect themselves against these risks. This thesis guides students through the steps of the risk management process to help them implement their own risk management treatment methods that fit their day-to-day campus life. Students will be able to play a more active role in their safety and have a greater understanding of how risk management can be implemented in every aspect of their life.
