May 2018
Abstract:

Studying abroad is a life changing experience for almost everyone. Those who partake learn new perspectives, experience other cultures, and they face and overcome unique challenges. Spending time abroad changes and grows a person like few other experiences could. Ball State offers a unique way of studying abroad through their Field Studies, which allow students to accompany a professor through a culture, or several, for a period of time. During this time they are immersed in the culture, and allowed to have experiences they could never have without the help of the professor and Ball State as a whole. The experience they gain during this these trips prepare them for their lives beyond college in giving them a whole new worldview. It helps them gain skills in cross-cultural communication, and increases their exposure to global health and nutrition. For the past sixteen years the Asia Pacific Field Study particularly accomplishes these goals by taking students into four unique cultures and providing them with experiences in several settings, from health, to religion, to popular tourist attractions. It takes learning beyond the classroom and into hands on experiences that will not easily be forgotten. Over the years the study has impacted students of all different walks of life. Two of these students, Jonathan Isbill and Toni Stoermann, undertook to develop a website that would showcase the trip and its inspiring leader, Dr. Jayanthi Kandiah. Through the site they provided a way for future students to get exposure to the field study, and assist any other visitors who wish to learn more about one of Ball State’s immersive study abroad opportunities, or even offering faculty an example of what a field study could look like if they wished to start one.
Acknowledgements:

The first person that deserves acknowledgement is Dr. Jayanthi Kanidah. A faithful advisor, and mentor to many students over the years she has provided both Jonathan and I guidance throughout our college careers. Dr. Jay lead the field study, allowing us both to experience the world in a way we never could have otherwise. Her years of work with the Asia Pacific Field Study allowed us to develop our thesis in the first place, and her support throughout has made its completion possible.

Also, I would like to thank Jonathan Isbill, my friend and partner in this project. Jonathan was the first to propose a collaborative thesis, and was instrumental in its completion. He encouraged me, and provided much of the background, without which we would not have been able to complete this project.

Additionally, I would like to thank the Honors College for offering us the opportunity to create this thesis, and giving us the chance to expand our knowledge and skills in such an active and applicable environment. Specifically, I would like to thank Dr. Barb Stedman for her advice and support at the beginning of our project, which set us on the right direction for the rest of our project.
