Abstract

I have been making films for nearly a decade, and in doing so, I have discovered how arduous the process is for licensing music for film and television. Today, filmmakers and other content creators are limited to just a few options for music licensing: 1) They can contact a record label directly and risk getting a delayed response or no response at all. 2) They can spend hundreds of dollars hiring a licensing agency to license the song for them. 3) They can substitute the song for a similar but less popular song from a micro-license catalogue. To help creators reap the benefits of all these options, I have developed this business plan for License Guru, a web application that uses statistical analysis to make music licensing more efficient. This plan includes thorough market research, specific operational plans, and informed financial projections that demonstrate this venture’s ability to establish and sustain a competitive advantage in the music licensing industry.

Acknowledgments

Thank you to Dr. Matt Marvel for advising this project throughout its completion. Most of the professional insight that informed this business plan was provided by entrepreneurs with whom he connected me.

On that note, thank you also to the countless mentors who took time to share their knowledge with me along the way, especially those included on License Guru’s advisory board: Joel Jordan, Jeff Ponchick, Matt Prasek, Justin Bates, and Stacey Evans.

And, of course, thank you to my wonderful family and friends who have supported me and my business throughout this journey.
